

as in the satisfaction of having a cow which has produced a worthy offspring. There are two serious drawbacks in the way of doing this. First, the farmer has to select the best of his cows to save the earliest and choicest plants for seed producers; second, the farmer is probably care for and use the seeds after they are grown at Chas. Greenwood.

We have succe<sup>ed</sup>ed much better with a few of moderate size. One cow yielding 15 pounds of a much better quality—as the former having a good deal of water in it—will yield more world yield to the influence of a good steady feeding with well balanced food. The production of rich milk, and short lactation, will be the result. It will often more in quality than quantity while the latter, on being full fed with good food, will be more ready to lay out—[E. W. Stewart.

Gen. L. F. Ross, Iowa City, Iowa, who has been the first to introduce the registered cow in this country, has introduced the West, and who has some of the [Hedge farm] Jamestown cattle, writes that he has been successful in getting his farm during the past year 31 pure bred cows and as many business grades. The pure breeds averaged over \$250 each and the business grades over \$100. He brought from \$75 to \$100. One of his polled cows has had two heifers twice over and is still milking. Three of them are alive and doing well.

Disease comes in by hundred weight and goes out by ounces. That rickety

He will take more of Warner's Compound for Croup and Consumption Remedy to restore health, but it is the best remedy.

20. The so-called "French Mastix," so long known as "Lefort's liquid grafting wax," is made by melting one pound of "concrete" (the best) in a tin, and adding one ounce in one ounce of best tallow. Take from the fire, and, when it has partially cooled, mix in eight ounces of alcohol. If you wish to use it for grafting, it should be placed over the fire; but great caution must be used to keep the alcohol from catching. When used for grafting, it should be kept in small glass bottles, and kept well covered or corked. This was until quite recently kept secreted in the shops of the "Grafting Experts" from France.

Mr. Joseph Barnard, of Hopkinton, N. H., exhibited a sample of butter at the Centennial Fair, which was pronounced the remarkable for its June shade of color, yet no artificial coloring was used in its manufacture. Over forty years ago, Mr. Barnard's father introduced upon his farm, and have been in breed ever since, with only two crosses of other breeds. The cows are from Jersey. Mr. Barnard keeps about ten cows and sells choice ungrated colostrum at prices within the reach of his neighbors. He says that his cows are never to be classed as "scrubs" by breeders of registered stock, but they are such cows as are common in every country richer than Connecticut in every animal product.

Mr. S. E. Cook in a recent issue of the Jersey Bulletin writes of the famous cow, Rosa F. W., 12,226, belonging to Mr. O. W. Cook, of New York, which was born, whose milk was 60 percent cream, and Rosa F. W. has been fed for more than a year and a half on a quart of grain per day, consisting of two quarts of timothy

and two quarts of provender (two thirds corn meal and one third oats). Mr. F. W.'s pasture is small, so he is obliged to feed his hay twice a day through the summer. As soon as cold weather comes on, the stock is stabled and fed good hay in the morning, swale hay at noon and ensilage at night. She was giving three quarts per day and about eight and one-half months after calving. She is a large milker but a very rich one. She dropped a fine heifer calf Jan. 21, 1901. Victor F. W. Rosa F. W. has a record

**The Blood.** It is the source of health, therefore, to keep well, purify the blood by taking the blood-keeper, Sarsaparilla. This medicine keeps the blood and the system pure and free from all blood and through that upon all the organs and tissues of the body. It has as its chief action, also, upon the secretions and excretions, and assists nature to expel from the system scrofula, humors, impure particles and effete matter through the skin. It effectually aids waste matter to be eliminated through the bowels, and debilitated organs. A trial will surely show that it does possess purifying and curative power.

**PAV'S REASON.**—Pat O'Hooligan, whitest of the whites, the first of our highest order of builders, lost his footing and fell. Over and over he went until within thirty or twenty-five feet of the pavement, when he would have been killed. He was so weak that he could not get up, and he was so weak that he could not grasp it first with one hand, then with the

—We have a speedy and positive cure for Catarrh, Dysentery, Colic, Mouth and Headache, in **SHILOH'S CATARRH REMEDY**. A nasal injector free with

Nothing pleases a lover more than to hear his girl talk; the silvery accents of her voice fall like soft music on his ears, and her courtly inanities are to him richer than the golden grains of the philosopher and sage. How different it is a few years after marriage! Instead of a telling her, as he used to do, that her voice is melody and her artless chatter a poem, he says, 'Give us a rest, if you can't talk sense!' What a strange world it is to be sure.

**BAKING  
POWDER**  
Absolutely Pure.

This powder never varies. A marvel of purity,
